Languages

French
Native language

English
C1 Level
› TOEIC : 960/990

Hard Skills

Programming languages : Python, C, C#, C++, Java and JavaScript

Databases : PostgreSQL et MySQL

Git : (GitHub/ GitLab)

Docker

Tensorflow

Pytorch

Soft Skills

Autonomy

Adaptability

Collaboration

Communication

Creativity

Organization

Interests

Table tennis
Departmental 1 level in team events and pre-regional in individual events

Cinema

Alexis MIALON

AI Student

Research student pursuing an Computer Science Engineering degree at EPITA. Passionate about computer science and artificial intelligence in particular, I am eager to learn and apply my skills to real-world projects.

Education

- **Computer engineering student**
Since Sept. 2023 [EPITA](#) Lyon, France
- **Semester abroad**
From Jan. 2025 to May 2025 [CENTRIA University](#) Kokkola, Finlande
- **General Baccalaureate**
July 2023 [Charles de Foucauld High School](#) Lyon

Projects

- **Implementation of dedicated algorithms in TAGADA**
Since Feb. 2026 [LRE](#) Lyon
Research project within the LRE security/systems team aimed at optimizing the performance of the TAGADA differential cryptanalysis tool.
 - Implementation of algorithms to optimize active S-box minimization (C++).
 - Automation of cipher round recovery (JSON file parsing).
 - Benchmarking using containerization (Docker).
- **PING**
From Mar. 2026 to July 2026 [EPITA](#) Lyon
Collaborated within a 5-person Agile team to implement an online IDE designed to teach programming to beginners aged 15–25 (Java backend, React frontend)
 - Designed the product using the Agile methodology (market research, user interviews, value proposition, user scenarios, and mockups)
 - Automated backend testing using a GitLab CI/CD pipeline
 - Wrote backend documentation following the Javadoc format
 - Implemented the website interface and navigation using React
- **Yakamon (1 week)**
Feb. 2026 [EPITA](#) Lyon
Implementation of a REST API backend in Java using a layered architecture, designed to support a Pokémon-style game.
 - Implementation of API endpoints
 - Database management, data processing, and handling of associated queries
 - Implementation of unit and functional tests for the API using JUnit
- **42sh (1 month)**
Jan. 2026 [EPITA](#) Lyon
Development of a POSIX shell in C as part of a 4-person Agile team.
 - Implemented the shell's lexer and parser.
 - Managed GitLab workflows (reviewing and approving merge requests).
 - Designed and modeled the architecture using the Visitor and Composite design patterns to facilitate project maintenance.

Work experience

- **Research Student**
Since Feb. 2026 [LRE](#) Lyon, France
 - Optimization and implementation of cryptography and cryptanalysis algorithms
 - Rapid learning and article retrieval
- **Teaching Assistant**
Since Sept. 2025 [EPITA](#) Lyon, France
 - Managing the learning of C and Python programming for first-year students
 - Correcting practical assignments
 - Adapting explanations and addressing individual difficulties
- **Volunteer**
From 2016 to 2023 [Ensemble scolaire Charles de Foucauld](#) Lyon, France
 - Setting up and dismantling booths
 - Sales and cash handling
 - Facilitating activities (escape games)
 - Booth supervisor, managing a team of approximately twenty people
